

Time for Communication?

According to market studies from european consulting company MeyerMonitor, the managers from 89% of all multi-national companies refer to strategic communication and internal transparency as one of their most important problems.

Why Chatjet.

Company-wide communication is now considered an important pillar of a healthy company. In many places, this pillar is currently in very bad repair due to our fast-paced and hurried business environment. Routine conferences, especially for companies that respond from numerous offices, mean true supreme effort. Such effort result in lead times and absenteeism of the employees involved. Alternatives such as video or telephone conferences quickly reach their limits – even with a low number of participants, it is hard to guarantee a structured discussion. In addition, the exchange of important and rush documents is very difficult this way.

Chatjet solves communication problems in one fell swoop. Online conferences can be held in real-time. By doing away with the need of specialized hardware, your employees can participate from wherever they are in the world. Chatjet is completely browser-based and doesn't require any software installation.

However, Chatjet improves not only the pure availability of communication options, practical moderation functions dramatically increase the effectiveness of your conferences at the same time. In doing so, Chatjet is flexible and orients itself according to your company's structures. It offers solutions both for horizontal communication within departments as well as vertical communication above and beyond hierarchies. Additional advantages are encrypted communication via SSL and the rapid exchange of documents using integrated file transfer. Through automatic logging, all actions and discussions can be viewed and reviewed even after the conference is over – meeting notes are unnecessary. Chatjet brings your company one step closer to improving corporate communication, thereby connecting motivation and productivity.

The Computerman GmbH, manufacturer of the Chatjet System, is a full service provider. It will stand by your side as you enter a new communication era.

What Chatjet offers you.

- Independant, efficient server software**
 The software was optimized for short reaction times, even with very high visitor numbers.
- Immediately usable**
 It isn't even necessary to install third-party software (plug-ins, applets, or other) on the client computers – only a web browser is required.
- Database support**
 All usual database backends for user authentication are supported.
- Load distribution and clustering**
 Even with extreme high visitor numbers, smooth communication is ensured.
- Update in running operation**
 Adjustments can be made without interrupting the chat.
- Complete remote administration**
- Arbitrary number of chat rooms**
 As many chat rooms as you want, the number of chat rooms available simultaneously is not subject to restriction.
- Individual configuration**
 Each chat room can be individually adapted the way you want and to suit its purpose.
- Moderation**
 A moderator can control and monitor all activities in a chat room.
- Granting user rights**
 Individual adjustments can be made with regard to the functions that each user plans to use.
- Secure chatting via SSL encryption**
- File transfer**
- Perfect adaptation to corporate design**
 The layout can be completely changed according to your needs and desires.
- Polls and surveys**
 In moderated chats, the moderators can begin surveys among the participants that are assessed interactively in real-time using bar diagrams.

Companies which are committed to Chatjet.

Sal. Oppenheim jr & Cie. KgaA,
Frankfurt am Main

Based on Chatjet, an online conference system was designed and implemented for networking brokerage departments. The system was launched in 2002 in a company called Oppenheim and has been invaluable ever since. The Computerman GmbH continues to be a full service supplier.

MeyerMonitor,
Netherlands

MeyerMonitor is a supplier in the Enterprise Consulting field. To improve communication in customer companies, MeyerMonitor depends on moderated chat conferences that are held using Chatjet.
