

# Let Your Site be the Focus of Attention.

## Why Chatjet.

A community Web site survives on its members. In order to stand out from the multitude of competitors, you must be able to offer your members the most diverse features. This includes the members being able to find each other quickly and hassle-free and chatting openly within the community or privately. The times of gray Java chats are over – your chat should integrate itself seamlessly into the existing look and feel of your Web site.

Demanding members expect expanded functionality such as sending and receiving files, user profiles synchronized with their community, and individual contribution design.

Chatjet offers all this and more. Thus, not only all the visual elements of the chat can be simply adapted, the system is also highly integration-friendly in other areas.

Chatjet uses the existing database backend for your community without any problems and, from it, makes elements available, such as user profiles or dating functions – even within the chat. On one Chatjet server, you can create as many chat rooms as you want on various topics.

The Chat's user interface is based purely on the open Web standard – it no longer excludes users just because they don't want or aren't able to install Java applets or Flash applications, or are located behind a firewall. Even when managing or administrating your chat, Chatjet gives you powerful tools that enable you to always maintain control.

The Computerman GmbH, manufacturer of the Chatjet System, is a full service provider. It creates, designs, installs and takes care of your individual solution.

# What Chatjet offers you.

- **Independant, efficient server software**  
The software was optimized for short reaction times, even with very high visitor numbers.
- **Immediately usable**  
It isn't even necessary to install third-party software (plug-ins, applets, or other) on the client computers – only a web browser is required.
- **Database support**  
All usual database backends for user authentication are supported.
- **Load distribution and clustering**  
Even with extreme high visitor numbers, smooth communication is ensured.
- **Update in running operation**  
Adjustments can be made without interrupting the chat.
- **Complete remote administration**
- **Arbitrary number of chat rooms**  
As many chat rooms as you want, the number of chat rooms available simultaneously is not subject to restriction.
- **Individual configuration**  
Each chat room can be individually adapted the way you want and to suit its purpose.
- **Moderation**  
A moderator can control and monitor all activities in a chat room.
- **Granting user rights**  
Individual adjustments can be made with regard to the functions that each user plans to use.
- **Secure chatting via SLL encryption**
- **File transfer**
- **Perfect adaptation to corporate design**  
The layout can be completely changed according to your needs and desires.
- **Polls and surveys**  
In moderated chats, the moderators can begin surveys among the participants that are assessed interactively in real-time using bar diagrams.

## Companies which are committed to Chatjet.
